

CleanPowerSF

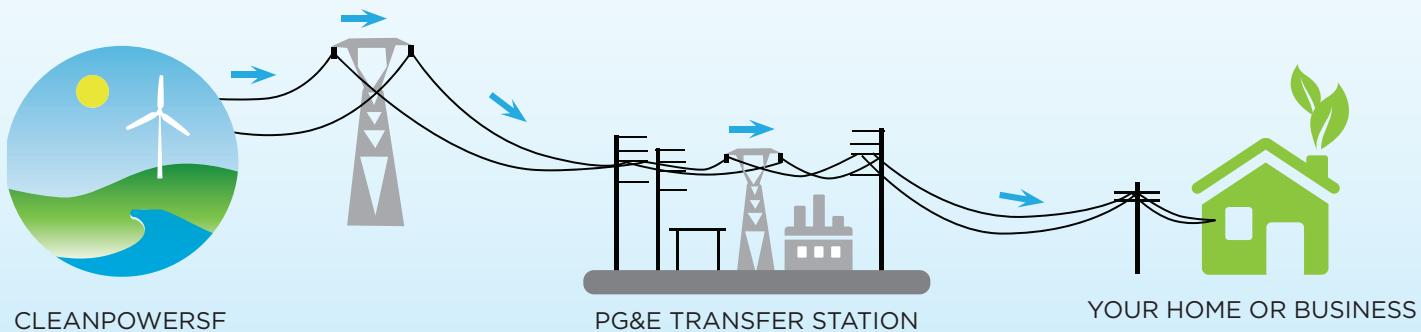

Same Service • Cleaner Energy

How Your Power Service Works Now.

You don't have a choice in how PG&E selects your power. Your electricity is generated from nuclear, natural gas, hydroelectric and other energy sources. PG&E transmits and distributes this energy directly to San Francisco homes and businesses.

CleanPowerSF Will Be Cleaner.

CleanPowerSF will generate your electricity from 100% renewable resources like solar, wind and others.

Cleaner Energy at Fair Rates.

In order to provide San Franciscans with a new, cleaner energy product – the cleanest energy available in fact – generation rates for CleanPowerSF will increase over existing PG&E rates. However, renewable energy resources like solar and wind never run out, which will translate into long-term price stability. The rest of the line-item charges on your bill will remain the same. If you don't want to pay extra for cleaner energy, you can easily opt-out once you are enrolled.

Why CleanPowerSF?

It's Cleaner.

Energy supplied by CleanPowerSF will be cleaner and more renewable than energy currently available to San Francisco consumers. CleanPowerSF will decrease our current dependence on fossil fuels and nuclear energy and will be 100% renewable from day one.

It's Easy.

When CleanPowerSF begins, you will immediately receive energy that is much cleaner than the energy currently provided by PG&E. You won't have to do a thing. It's that simple, even your PG&E bill will look the same. If you don't like the program you can easily opt-out at any time.

Discount Pricing Programs Will Still Apply.

Low-income discounts will still apply to CleanPowerSF customers.

Support Us.

It's cleaner and it's easy. CleanPowerSF will do everything for our environment. To find out more, go to cleanpowersf.org.

CleanPowerSF will be administered by the San Francisco Public Utilities Commission (SFPUC), the City's water, sewer and municipal power utility. The SFPUC already generates approximately 17% of the City's energy needs through resources like solar power and hydropower that produce zero greenhouse gas emissions. We also provide the pristine water delivered by gravity to your tap and award-winning sewage treatment that protects our local waterways.
